Part 0 Document Administration

0.1 Document Approval

This document has been established in accordance with an alternative procedure to DOA approved under EASA AP429.

This installation manual is applicable for following part numbers:

•	Maximus	PowerMax	VAC	AVE-MP18LW-T01	L
---	---------	-----------------	-----	----------------	---

Compiled by:		17 May 2018
	Peter Nezval	
	Engineer, Aveo Design Group, s.r.o.	
Approved by:		17 May 2018
Approved by	Georg Hartl	17 May 2010
	Head of DO, Aveo Engineering Group, s.r.o.	

0.2 Amendment Record Procedure

The master copy of this document shall be kept electronically as a read only document under the control of Aveo Engineering Group, s.r.o. as Master Copy.

ALL amendments to this manual will initiate a raise of issue.

The original issue will be identified by "01", and subsequent issues will be numbered sequentially from 02 to 99 in Table 01 - *Issue No.* column.

ALL issues of this document will be approved by Head of DO.

Issue No.	Details	Date of issue	Effected Pages
01	Initial Issue	17 May 2018	ALL
Table 01: Record of Document Amendments			

0.3 Effected Pages Procedure

ALL pages affected by ANY raise of issue of this manual will be listed in Table 01 - **Effected Pages** Column.

The reason(s) for **EACH** raise of issue and the description of respective change will be provided in Table 01 - **Details** Column.

Changes from the previous issue are shown as follows:

- a) new text is highlighted with yellow shading: new
- b) deleted text is shown with yellow shading and a strike through: deleted

0.4 Distribution List

As stated in section 0.2 above; the master copy of this document shall be kept electronically as a read only document under the control of Aveo Engineering Group, s.r.o. as Master Copy.

All holders of copies of this Document will be recorded by listing in Table 02 – Distribution List.

Copy holders listed hereunder will be issued a copy of this document with sequential copy number as shown in Table 02 – Distribution List.

Copy No.	Holder

Part 1 Installation data

1.1 Maximus PowerMax™

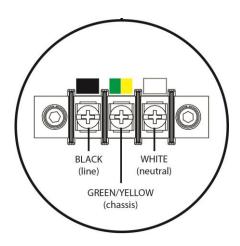

Maximus PowerMax[™] is a high powered LED light use in GA and transport category aircraft. It have been designed to be lightweight and with a low power draw to meet the highest requirements of all certified aircraft.

Maximus PowerMax 28VAC 400Hz PN : AVE-MP18LW-T01

1.2 Operating Instructions

When installed on the aircraft, using the aircraft's power (28 volts), the light will be at its maximum intensity. *Operating Voltage range is 27-29VAC @ 400Hz.*

1.3 Installation Schematic / Wiring Diagram

Wire type: multicores 20 AWG and 22 AWG,

600 V insulation, 200°C rating;

Wire length: 11.81" minimum (300 mm

minimum)

Recommended wire AWG size: 16

1.4 Control & Power Inputs

BLACK Line Neutral **GREEN/YELLOW** Chassis

1.5 Technical Specification

Light characteristics: Landing Light / PAR64 replacement

Voltage range: +27..+29 V AC @ 400Hz

Voltage protection:

a. Transcient voltage: 2 second +40VAC c. Over-voltage lockout: +30VAC, not less.

LED quantity: 18 pcs

Performance: a. Output current: 0.85A per LED

b. Output power: 170.5W max c. Input current: 7.5A rms max

d. Input power: 200W

Chromaticity: Cool White, Color shade 1C0 **Viewing Angle:** 12° Landing (symetrical) **Low temperature slope start:** -55°C / -67°F

Ambient temperature: -55°C...+85°C / -67°F...+185°F

Overheat protection: Yes

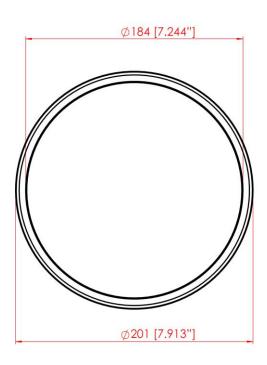

Wiring: N/A, Terminal Block – 3 contacts

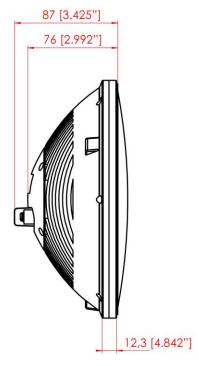

Black – line White – neutral

Green/Yellow - chassis

Useful life: not less than 30.000.0 aircraft flight hours.

1.6 Technical Drawing

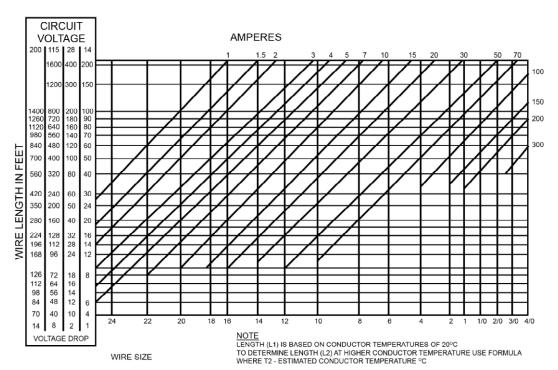

^{*}dimensions in [inches] / mm

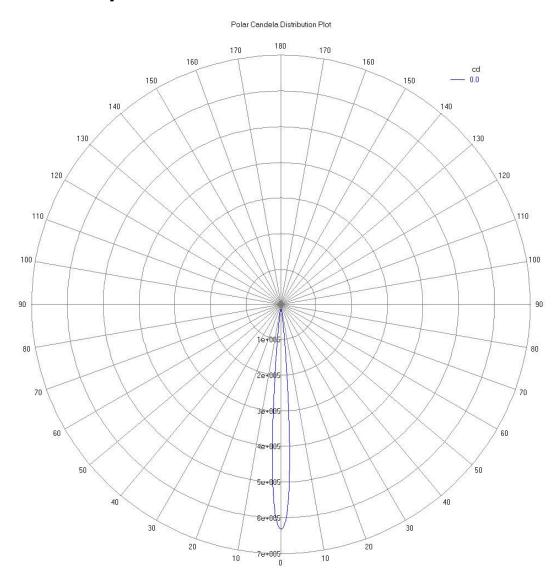

1.7 Wiring Chart

VOLTAGE DROP CHART INTERMITTENT FLOW AT 20° TIN-PLATED MIL-W-27759 CONDUCTOR

1.8 Optic Simulation

1.9 Equipment Limitation

Maximus PowerMax™ 28VAC should only be powered by 27-29VAC @400Hz.

1.10 Care and Cleaning of Lights

Aveo Engineering Aviation Lights are factory polished and delivered as ready to install on the aircraft.

If the lights need a deeper cleaning, they should be polished with a quality lamb's wool sheet that is suitable also for deeper polishing. Under no circumstances should any petroleum based product be used to clean the lights.

1.11 Testing the Lights before Installation

All Aveo Aviation lights undergo rigorous testing prior to being released from our engineering manufacturing department. This testing involves a burn-in time as well as other function testing. No light is released for sale without undergoing this extensive operational testing.

When you receive the **Maximus PowerMax**TM **28VAC** light, and wish to test the function of the light prior to installation on your aircraft, please note the following:

1. Please review the written information that is enclosed in the packaging.

Warranty information as well as a cautionary note about power supply removal is enclosed with each package.

2. Remove the light from the package. Note that there is connector with 3 colors:

Black – Line White – Neutral Green/Yellow – Chassis

3. Testing of the function of the light can be done with a regular 28VAC power supply (not a battery charger). Connect the line wire to black pole, neutral wire to the white pole, and then connect the chassis to the green/yellow pole. The Maximus PowerMax light should start lighting. When installed on the aircraft, using the aircraft's power (28 VAC@400Hz), the light will be at its maximum intensity.

After testing, the light can be installed on the aircraft.

IMPORTANT NOTES:

Under no circumstances should any power supply other than a 27-29 VAC @400Hz, or a 28 volt battery be used to test the light. Do not use: Battery chargers, battery back-up power devices, or other bench avionics testing methods to test the aviation light. The light is functional between 27 and 29 volts. Use of a battery charger or other power unit to test the light will void the warranty and may damage the light.

If you have any questions about the installation of the lights, please refer to our web site: www.aveoengineering.com

1.12 Notes on Installation

I Spread the tightening forces evenly around the mounting hole. Stainless steel screw is recommended. Length depends upon placement location on aircraft.

1.13 Continued Airworthiness Information

a. Circuit/Wiring Protection

Each Galactica series light features a **Negative Temperature Coefficient** (NTC) circuit that limits internal temperatures by attenuating operating current (with a corresponding reduction of brightness) when internal temperatures reach a certain threshold. This proprietary circuitry serves to protect the light itself, and associated aircraft wiring, against a thermal runaway condition.

b. Periodic Inspection Procedure for Galactica Series

The Maximus PowerMax™ lights should always be checked for proper operation during preflight. This procedural information is already provided in all general aviation aircraft flight manuals.

The lights should be visually inspected for general condition, proper operation, and correct installation at each annual and/or 100 hour inspection. Any debris or atmospheric deposits accumulated on the surface of the lights should be removed using a UV Wax such as Farecia Profile UV Wax to ensure ongoing optical clarity. In addition refer to section 10 of installation manual for detailed cleaning instructions.

Turn the lights to the steady mode and do the following:

- 1. Put on polarized sunglasses or welder goggles to prevent eye damage when looking into the lights.
- 2. Examine the individual LEDs as per the diagram below. If any of the conditions as indicated on the diagram are exceeded, the light shall be removed and sent to Aveo Engineering for replacement under the Aveo Warranty Program.
